Start the demo stand

To start the demo stand, please copy <https://demo1.ekassir.com/ib> into your web browser address bar.

Scenario “Internet Bank Overview”

№	To do	Comments
1	Input login – “ testuser ” and password – “ Qwe1234\$ ” Then input a code from SMS – “ 1234 ”	Input SMS-code may not be required.
2	After login, check the “ Available balance ”, which is the sum of all customer’s bank products in different currencies: euro, USA dollar.	Feature “Favorite currency” recalculates all available balance in a single chosen currency.
3	Click on “ Cards ” and view all available cards for the client. Choose the first card and click on it. In the “ About the card ” menu, we can see the card details. In the “ Replenish ” menu, we can make a money transfer between the accounts. Select the source account and input the transfer amount – “ 500 ”. Enter the SMS-code – “ 1234 ” и “ Confirm ” the transaction. In the “ Limits ” menu, check the limit we can set for the card.	

¹ The basic functionality of Internet Bank covers all requirements for building modern remote banking system. Micro-service architecture allows you to expand the functionality of remote banking system with minimal testing work and fewer bugs in the code.

	In the " Tariffs " menu we can read the terms of the card service.	
4	Click on " Loans ". Choose a product. In the menu on the right click on " Payments schedule " to view the due dates.	Menu for loans management is almost the same as for cards management.
5	Click on " Card order ". Choose any card from two and apply the form. Click " Next " in each step. To confirm the card ordering, enter the SMS-code " 1234 " and click " Confirm ".	The fields in the form are filled in automatically using the data client has specified earlier. Edit the data if need and press "Next".
6	" Operations history " is available on the screen below the payment templates area. It contains a several filters for bank products, time, and types of transactions. Click on any transaction, after " Operation details " and " Repeat operation ". After clicking on " Repeat operation ", confirm creation of new template (select " Save the template? ") and continue the transaction. You can change a card number, if required. Enter the SMS-code " 1234 " and " Confirm " the transaction.	Operations history displays the data about financial and non-financial transactions. For example, you can get the information about p2p-transfer or your request for a new card. You can get a receipt of payment or repeat any transaction.
7	Click on " Payments and transfers " in the top right corner of the screen. In the menu " Transfers " choose " Transfer to other client of the bank ". Set the transfer type – " By phone number " Input a phone number of the recipient - " +7(921)111 11 11 " Choose a card or on account to pay – " Classic1 " Input an amount of transfer – " 100 " and click " Next ". Input SMS-code – " 1234 " and " Confirm ".	
8	In the right side of the screen " Templates " are available. They were saved before and we can repeat payment. Choose any template and click the right arrow. Check the details and click " Next ". Input SMS-code – " 1234 " and " Confirm ". The templates are grouped in categories. Choose the category " Auto ". Choose any template and click on dots "...". Select " Edit ". Change the amount to 100 and click " Save ".	
9	Click " Branches, ATMs " in the bottom of the screen.	
10	Click on the banner on the right side of the screen and move to the landing page of the advertising campaign. One more place for advertising is the login page of Internet bank.	There may be additional advertising placed in Internet Bank. Advertising campaigns are set via web-service CloudAdNet. Please request a scenario for demo.
